Quantum Flex™ Composite Road Markers

Day & Night Visibility

Flexible

Easy Installation

Flexible, fiberglass reinforced composite road markers from QMG provide a safe, low maintenance alternative to metal roadside delineation. The unique design and composition of the Quantum Flex Marker™ allows for substantial abuse. Quantum flexible markers are designed to withstand repeated vehicle impacts in virtually all weather conditions. Ideal for general roadside delineation. The unique design provides the optimum combination of flexibility and structural integrity for easy installation and allows for a recessed reflective sheeting area that protects the sheeting during impact.

Features & Benefits

Weather Resistant

Quantum Flex Markers™ are constructed from a fiberglass reinforced composite which is ultraviolet resistant and temperature stable. They will not become brittle when cold or soften under heat, thereby remaining flexible in virtually all weather conditions.

Lower Maintenance

Solid color impregnated throughout the marker. Never needs painting! Will not fade & crack like thermoplastic or rust & rot like metal or wood.

Flexible

Capable of withstanding repeated vehicle impacts, thus greatly reducing the added cost of maintenance associated with marker repair or replacement.

Easy Installation

Installs fast and easy using industry standard tools. A typical installation takes less than one minute.

Versatile

Available with or without identification decals, reflective sheeting or letters and numbers. Choose from a variety of colors and sizes to match your application. Small signs can also easily be attached to the marker.

Lightweight

Strong composite material is 75% lighter than steel & 10 times stronger than typical thermoplastic. Easily stores and transports to the job site.

Fire Resistant

Capable of withstanding small grass fires and controlled ditch burns. Will not soften and melt like common plastic.

Cost Effective

Longer life, lower maintenance and reduced transportation cost. Quantum Markers stay on the job longer with lower overall cost.

Quantum Flex™ QM - 375 Specifications

| | |
|--------------------|--|
| Material: | Glass Reinforced Polyester Composite |
| Weight: | 0.62 lbs per foot |
| *Standard Lengths: | 62, 66, & 72 inch |
| Width: | 3 15/16 inch |
| * Standard Colors: | White, Orange, Yellow, Blue, Green, Red, Brown |

A high performance marker designed for roadside delineation applications. Offers the best choice for overall visibility and flexibility. The unique symmetrical design combines the strength and installation characteristics of standard flat markers, with the lower bending radius associated with curved type markers.

EASY INSTALLATION

Installation is easy as 1, 2, 3!

1. Insert marker into driver.
2. Rotate driver with marker into position.
3. Drive marker with a series of light taps.
(Brace your foot against marker to stabilize during installation)

As Specified

The symmetrical three rib profile optimizes rigidity, stability and flexibility. This provides an unobstructed recessed message area on both sides of the marker, offering protection of the warning message.

* Custom colors or lengths available upon request
