Detectable & Non-Detectable Marking Tape

Underground Detectable Marking Tape

Underground detectable warning tapes are 5 mils thick and consist of a triple layer lamination. The center aluminum core is sandwiched between a top and bottom layer of 100% virgin polypropylene. The printing and graphics are subsurface and are protected from being scraped off or erased. Available in 2", 3" and 6" widths X 1000 foot rolls.

Underground Non-Detectable Marking Tape

Underground non-detectable warning tape is 4 mil 100% virgin polyethylene. We use organic pigments specifically designed to maintain their color when exposed to moist soil or harsh environmental conditions. These tapes contain no heavy metals or chromates. Available in 3" and 6" widths X 1000 foot rolls

Above Ground Barricade Tape

2.5 mil above ground barricade tape is the perfect economical solution for alerting the public of temporary, hazardous or restricted areas. Available in 3" and 6" X 1000 foot rolls. Most industrial and municipal legends are readily available.

Generic and custom legends and graphics are available
